

PushApp

Screen inventory — current state

Every screen currently implemented in the app, captured directly from the running build at phone width. Each page names what the user *does* there.

11 screens · 2026-07-21

For design reference · generated from the running PushApp build

Home

01/11

The action screen — “what should I do now?” The user taps the round check on any Step card to mark it done (the Buddy reacts and rewards land at once), or opens a Step’s menu to Mark done, Postpone (the miss-recovery flow), see past reasons, or view details. The coral + starts a new Journey; the four glossy tiles around the Buddy jump to Journeys, Achievements, Missions and Consistency, and the XP/coin bar opens the Shop. The cream “Week’s steps” panel drags upward to reveal more Steps.

/

Explore

02/11

The discovery surface — “what could I become next?” The user types in the search bar to filter across Journeys, creators and brands (or clears it with the X). The horizontal carousels — For you, Top creators, From brands — scroll sideways to browse ready-made Journeys and the people who make them. Content here is representative sample data; the marketplace backend is not wired yet.

/explore

Friends

03/11

The Support Circle. The user sets a public handle, then adds friends by handle with Add, and accepts or declines incoming requests inline. "Needs your cheer" rows carry a coral Cheer pill for one-tap encouragement of Journeys they're an Ally of; every other friend row opens a 3-dot menu (Cheer / Gift / Message). + Invite, top-right, brings new people in.

No friends yet. Add someone by their handle above and grow your Support Circle.

/friends

Buddy

The companion's home. On the live native app the real 3D Hopper Buddy stands in the centre of this scene — it can't render in the web build, so the centre reads empty here. The user browses the inventory panel's tabs (Character, Clothing, and more) and taps a cosmetic to equip or unequip it on the Buddy; the XP/coin bar and shop button up top jump to the Shop to earn or spend Coins.

/buddy

Inbox

05/11

The messages surface. The user switches between the Friends, Allies and Groups sub-tabs; a coral dot marks any tab holding something unread. Friend requests are actioned inline with Accept / Decline, while accepted friends and received cheers appear as conversation rows. Groups is a themed placeholder for now.

/inbox

Journeys

06/11

The “what am I working toward?” list. The user switches the Current / Completed / Future tabs and taps any Journey card to open its detail. The coral + button starts a new Journey and the gold trophy button opens Achievements; Close returns Home.

/journeys

New Journey

07/11

The Journey-creation wizard — six short stages (Name → Your why → Duration & rhythm → Steps → Reminders → Summary), where only the name is required. The user types values (tapping the pencil rows to edit duration or rhythm via chips), adds a recommended ≤ 2 -minute Starter Step plus further Steps, optionally toggles an on-device reminder time, then taps Create on the Summary. Next / Back move between stages and the top progress bars are tappable.

Weekly planning

08/11

The start-of-week review — “Your week.” Grounded by the Journey’s “why” pinned at the top, the user reviews next week’s Steps grouped by day, then taps Approve week to commit the plan (a soft commitment, never a lock) or Edit plan to change it. The back chevron dismisses.

/weekly-planning

Missions

09/11

A floating rewards modal. Under the Missions tab the user switches the Daily / Weekly sub-tabs and taps Claim on any completed mission to collect Coins; the Login tab shows a 7-day reward rail with a single Claim for today's Coins. Missions grant Coins only, never XP. Tapping outside the card, or the X, closes it.

/missions

Shop

10/11

Where earned Coins are spent on Buddy cosmetics. The user scrolls the Cosmetics grid and taps a gold price chip to Buy an item (dimmed when they can't afford it), then Equip or Unequip it. The category sub-tabs (Featured / Cosmetics / Coins / Offers) switch shelves — only Cosmetics is wired to real data; the rest show a gentle “coming soon” note. The back chevron closes.

/shop

Achievements

11/11

A warm medals wall. The user filters All / Journeys / Social and taps any medal to open a detail sheet with its unlock condition, progress and reward (close with X). Locked medals show a muted progress count. These are sample medals for now — the achievements engine isn't built yet.
